MEMORANDUM FOR: Commanding Officer

9 APR 1957

ATTENTION: Director, Countermasures Division

INFO: SIGFM/EL-RCD

SUBJECT: Transistorized Communications Receiver

REFERENCE: Requisition W28-003-368-SCSLA-56

1. Referenced requisition of 26 October 1955, indicated your desire to purchase one (1) each of the basic transistorized receiver, complete with two tuning heads to cover the frequency range of from 3 to 12 mc and from 12 to 30 mc, and other operating accessories.

2. In July 1956, the first units of this receiver, with only the 3 to 12 mc tuner, were delivered to us for examination and evaluation. Development of the 12 to 30 mc tuner was currently underway and delivery was not expected before early 1957. Examination of this first unit indicated that calibration of the 3 to 12 mc tuner was in serious error and the contractor was so advised. Subsequently, a series of tests have been conducted to ascertain the cause of the trouble and work is now in progress to correct this condition.

3. Development of the 12 to 30 mc tuner, item 2 of referenced requisition, is still in progress and delivery is not expected before April of this year, due to difficulty in producing the special coils required.
